

Webmin

sie 7, 2025

Setup

The simplest and best way to get Webmin is to use automatic webmin-setup-repo.sh script to configure repositories on your RHEL or Debian derivative systems. It can be done in two easy steps:

```
curl -o webmin-setup-repo.sh https://raw.githubusercontent.com/webmin/webmin/master/webmin-setup-repo.sh
sh webmin-setup-repo.sh
```

This script will automatically setup our repository and install our GPG keys on your system, and provide webmin package for installation and easy upgrades in the future. The supported and tested systems are Red Hat Enterprise Linux, Alma, Rocky, Oracle, CentOS Stream, Fedora or Debian, Ubuntu, Kali.

Install

If Webmin repository was setup using our webmin-setup-repo.sh as described above then Webmin can be installed as easy as:

```
apt-get install webmin --install-recommends
```

Access

<https://localhost:10000>

Samba Windows File Sharing
